This brochure has been produced with the financial assistance of the Interreg IPA CBC Italy-Albania-Montenegro Programme. The contents of this brochure are the sole responsibility of Port of Bar and can under no circumstances be regarded as reflecting the position of the European Union and of the Interreg IPA CBC Italy-Albania-Montenegro Programme Authorities.

**EFINTIS** aims to increase efficiency of the intermodal transport flows in the Programme area by upgrading management information systems. The strategy of this project is also to harmonize the ICT actions of the region with EU standards and requirements. In order to have an effective maritime and other intermodal transport connections these requirements need to be met.

Project main objective is to increase efficiency of the intermodal transport flows by upgrading management information systems of involved actors. The project will enable/improve or establish new ICT connections between different modes of transport for passengers as well as for goods (maritime, road and railway transport). Collection of transport related data in digital way will enable faster administrative procedure (Custom procedure, port service procedure, etc.). As ports are usually hubs for all modes of transport, data collection and exchange will be established and will enable faster administrative procedures.

Considering different levels of progress and the existence of ICT platforms the project activities will produce Action plan for development of ICT connection which will aim at improving connections among ports in order to meet technological requirements of today. Major EFINTIS project output will be 4 pilot actions and 1 development study.

**Budget:** 1.075.500,00 EUR (IPA II Co-financing 914.175,00 EUR)

**Duration:** 24 months (01/07/2020 - 31/06/2022)

**Founded by:** Interreg IPA CBC Italy-Albania-Montenegro Programme

In Bar, the pilot is focused on Customs recommendations aiming at better evidence of freight movement in the free zone Port of Bar.

In Durres, first phase of the PCS will establish the ICT tool for exchange of EDI (or other type) messages among members of port community.

In Termoli, a new ICT tool will be developed and it will be related to connecting the IT security system to all relevant stakeholders.

In Bari, ferry/passenger transport will be improved by using developed services in the PCS.

Development study of Albanian Institute of Transport will cover development of intermodal logistics centers in Albania and possible ICT connections between them.

**EFINTIS will open the door for integration, foster mutual cooperation and create new solutions for common challenges.**
